

Aim:

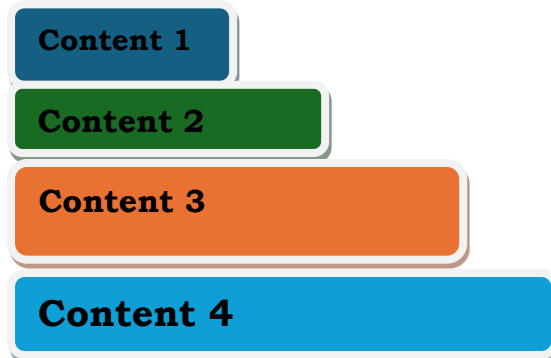

To develop simple Web Applications by applying styles to Web page design.

Problem Statement(s):

- 1) Write a style rule that will place a nice frame around an image element. Choose suitable color, design and size for the border.
- 2) Place multiple images one over the other like deck of cards.

- 3) Use the CSS Position property to place multiple contents in a stair case format.

- 4) Write an external style sheet that sets the following properties:
 - a) font-family property for all elements of the document.
 - b) Change the background color of a web page.
- 5) Design a HTML form for Registration to a technical symposium by an Institution. The form should get the needed details of the participants, the event preferences and date.
- 6) Add a photograph of yourself and float it to the left side of the webpage using CSS
- 7) Apply the border-radius Property for a paragraph content. Also do the following
 - a) Rounded corners for an element with a specified background color, padding, width and height
 - b) Rounded corners for an element with a background image
- 8) Design a Vertical and Horizontal Menu as shown below using Navigation Link

Vertical Menu	Horizontal Menu
